

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1-5. (Cancelled).

6. (Previously Presented) A method of displaying calendar information comprising:
displaying a weekly view graphical image on a display screen, said display screen is switchable between a small display mode which is substantially square in shape and a tall display mode which is substantially rectangular in shape using a sliding mechanism, wherein said weekly view graphical image comprises days of the week and appointment icons therein;

visually highlighting appointment icons in response to user navigation input;
in response to a user selection of a first highlighted appointment icon,
automatically displaying a preview window comprising details of said first highlighted appointment icon on said display screen, wherein said preview window is displayed simultaneously with said weekly view graphical image which remains user accessible while said preview window is open; and

removing said preview window in response to a user selection outside of said preview window while said preview window is open.

7. (Previously Presented) A method as described in Claim 6 further comprising, in response to a user navigation to a second highlighted appointment icon, automatically updating said preview window to display details of said second highlighted appointment icon on said display screen.

8. (Canceled).

9. (Original) A method as described in Claim 7 further comprising removing said preview window in response to a user selection while said preview window is open.

10. (Previously Presented) A method as described in Claim 6 wherein said visually highlighting comprises:

highlighting days of the week in response to left/right navigation; and
highlighting appointments within a highlighted day in response to up/down navigation.

11-15. (Cancelled).

16. (Previously Presented) A computer system comprising:
memory coupled to a bus;
a processor coupled to said bus; and
a display screen coupled to said bus, wherein said memory comprises instructions for implementing a method of displaying calendar information, said method comprising:

displaying a weekly view graphical image on a display screen, said display screen is switchable between a small display mode which is substantially square in shape and a tall display mode which is substantially rectangular in shape using a sliding mechanism, wherein said weekly view graphical image comprises days of the week and appointment icons therein;

visually highlighting appointment icons in response to user navigation input;
in response to a user selection of a first highlighted appointment icon, automatically displaying a preview window comprising details of said first highlighted appointment icon on said display screen, wherein said preview window is displayed simultaneously with said weekly view graphical image which remains user accessible while said preview window is open; and

removing said preview window in response to a user selection outside of said preview window while said preview window is open.

17. (Previously Presented) A computer system as described in Claim 16 wherein said method further comprises, in response to a user navigation to a second highlighted appointment icon, automatically updating said preview window to display details of said second highlighted appointment icon on said display screen.

18. (Canceled).

19. (Original) A computer system as described in Claim 17 wherein said method further comprises removing said preview window in response to a user selection while said preview window is open.

20. (Previously Presented) A computer system as described in Claim 16 wherein said visually highlighting comprises:

highlighting days of the week in response to left/right navigation; and
highlighting appointments within a highlighted day in response to up/down navigation.

21-26. (Cancelled).

27. (Previously Presented) A method of displaying calendar information comprising:

collapsing an active input area for a display screen to enlarge an effective display area of said display screen

displaying a monthly view graphical image on a display screen, said display screen is switchable between a small display mode which is substantially square in shape and a tall display mode which is substantially rectangular in shape using a sliding mechanism, wherein said monthly view graphical image comprises days of the month and appointment icons therein;

visually highlighting days in response to user navigation input;
in response to a user selection of a first highlighted day, automatically displaying a preview window comprising details of appointments said first highlighted day on said

display screen, wherein said preview window is displayed simultaneously with said monthly view graphical image which remains user accessible while said preview window is open; and

removing said preview window in response to a user selection outside of said preview window while said preview window is open.

28. (Previously Presented) A method as described in Claim 27 further comprising, in response to a user navigation to a second highlighted day, automatically updating said preview window to display details of appointments of said second highlighted day on said display screen.

29. (Previously Presented) A method as described in Claim 27 further comprising displaying a full day view of said first highlighted day in response to a user selection provided said preview window is already open.

30. (Original) A method as described in Claim 28 further comprising displaying a full day view of said second highlighted day in response to a user selection provided said preview window is already open.

31. (Previously Presented) A method as described in Claim 27 wherein said visually highlighting comprises:

highlighting days of the month across a common row in response to left/right navigation; and

highlighting days of the month across a common column within a highlighted day
in response to up/down navigation.

32-36. (Cancelled).

37. (Previously Presented) A computer system comprising:

memory coupled to a bus;

a processor coupled to said bus; and

a display screen coupled to said bus, said display screen is switchable between a
small display mode which is substantially square in shape and a tall display mode which
is substantially rectangular in shape using a folding mechanism, wherein said memory
comprises instructions for implementing a method of displaying calendar information,
said method comprising:

displaying a monthly view graphical image on said display screen, wherein said
monthly view graphical image comprises days of the month and appointment icons
therein;

visually highlighting days in response to a user navigation input;

in response to a user selection of a first highlighted day, automatically displaying
a preview window comprising details of appointments said first highlighted day on said
display screen, wherein said preview window is displayed simultaneously with said
monthly view graphical image which remains user accessible while said preview window
is open; and

removing said preview window in response to a user selection outside of said preview window while said preview window is open.

38. (Previously Presented) A computer system as described in Claim 37 wherein said method further comprises, in response to a user navigation to a second highlighted day, automatically updating said preview window to display details of appointments of said second highlighted day on said display screen.

39. (Previously Presented) A computer system as described in Claim 37 wherein said method further comprises displaying a full day view of said first highlighted day in response to a user selection of said first highlighted day provided said preview window is already open.

40. (Original) A computer system as described in Claim 38 wherein said method further comprises displaying a full day view of said second highlighted day in response to a user selection of said second highlighted day provided said preview window is already open.

41. (Previously Presented) A computer system as described in Claim 37 wherein said visually highlighting comprises:

highlighting days of the month across a common row in response to left/right navigation; and

Appl. No. 10/616,091
Response Dated January 25, 2010
Reply to Office Action of November 25, 2009

Docket No.: 1070.P3821
Examiner: Zhou, Ting
TC/A.U. 2173

highlighting days of the month across a common column within a highlighted day
in response to up/down navigation
